

Inventory Management

 **SIMMS INVENTORY MANAGEMENT SOFTWARE.**

The screenshot displays the SIMMS software interface. At the top, the window title is "SIMMS - [Start page]" and the menu bar includes "File", "Setup", "Contact Manager", "Inventory", "Modules", "Administration", and "Help". The main area features a workflow diagram with two tabs: "Sales" (selected) and "Purchasing". The Sales workflow includes "Sales Quotes", "Sales Orders", "Invoicing", "Shipping", "Customer Payments", "RMA", and "Customer Statements". A central graphic for "XYZ PUBLISHING HOUSE 6.3" is shown with contact information: "78 Massachusetts Avenue, Cambridge, MA, 02139-4307". To the right, a "Toolbox" sidebar lists various functions: Inventory, Items, Transactions, Users, Customers, Vendors, Shipping, Kits, Stock Reservation, Item Transfers, Serial Numbers, Sales, Purchasing, Payments, General Ledger, Login, and Tools. A "LIVE HELP" button is also visible. The status bar at the bottom shows "Version: 6.3.0.39767", "Login: w", and "Company: XYZ Company Inc. (Database: SI_XYZ63)".

THE INVENTORY SOFTWARE SOLUTION
YOU CAN RELY ON.

SIMMS Inventory Management software incorporates additional features that enhance SIMMS' built-in purchasing, sales and inventory management by employing the following additional modules:

Accounting - Manage your accounting needs hand-in-hand with inventory using SIMMS' AP, AR and GL modules.

Multi-Currency - Sell and purchase using any currency in the world.

Point of Sale - Handle your retail demands with this interface to manage your cash register stations.

E-store - Manage your web-based sales from within a comprehensive application.

RFQ (Request for Quote) - Process specific quotes for potential customers then process orders based on them.

Apparel Matrix - Coordinate orders of styles, sizes and colors for items in your clothing business.

Replenishment - retain your desired stock levels by automating your re-stocking process.

Fulfillment - Process sales orders generated by the Replenishment module either one-at-a-time or in batches.

Depreciation - Track the depreciation of your stock from its first entry into the warehouse to its life after sale.

Service & Returns - Process your RMA and RTV cases in one easy-to-use interface.

Servicing - track warranties and schedule the servicing and repair of items.

Kitting (BOM) - Process your BOM needs parallel with your stock and ordering needs.

Work Order - Manage project time and worker resources to track and improve your bottom line.

Shipping - process orders from vendors to any of your locations automatically or manually.

Data Collection - process receipts and sales directly from your warehouse floor using various models of data collectors.

Serial Numbers - Track and manage serialized items from receipts through sales and returns.

SKU - Employ your items existing SKU numbers within the SIMMS system.

Visual Import Manager (VIM) - Import items, vendors, customers and transactions from other applications.

CRMUnleashed - Manage your business contacts, meetings, sales campaigns and customer service all in one place.

FEATURES

Barcode Printing	Both Code 39 and Code 128 bar code formats are supported for various printer as inventory labels with bar codes are printable for inventory items (additional codes available).
Comprehensive Reorder Points	The Reorder Report lists items of stock on hand that have reached their pre-designated reorder points, which can be unique to each location for each item. The suggested reorder point can be entered based upon either maximum stock quantity or economic order quantity.
History of Transactions	Transaction audit trail can be filtered by date, and a history of all inventory transactions is permanently maintained.
Item Aliases	Assign alias item numbers to each customer and vendor. These permit the user to search items by aliases for sales orders and purchase orders.
Item History	The list shows the invoice number with the invoice date that contains the items purchased. While examining the sales history of items, all invoices containing the items sold to specific customers can be reviewed.
Multiple Warehouses	Independent inventories of item can be managed in unlimited locations. In addition, items can be transferred between warehouse locations.
Physical Count Date	Simplify the physical count process and speed up data entry using Physical Count Worksheets. The Variance Report shows both the current physical count and the count shown in the system, allowing analysis of the difference.
Serial/Lot Tracking	Quality is improved by the tracking of items by serial numbers or manufacturer's lots, as well as providing an audit trail all the way back to the original purchase order.
Unlimited Vendors For All Items	Item information includes the last purchase price of an item and editable quantity price discounts.
Versatile Costing and Pricing Methods	Sales promotions and customer contract pricing may also be established. Standard and average costs are maintained for each item regardless of costing method. Prices can be calculated as a discount of the standard price or markup of the standard cost, and can be calculated based on FIFO, LIFO, average cost, standard cost, LIFO and FIFO methods. Price schedules based upon customer price levels can be assigned to each item.
Warranty Management	Warranty history is established for items on receipt and automatically recalled when items are returned using the integrated Return Merchandise Authorization (RMA) module.

SIMMS

inventory management system

Power and Integration	Coordinate your time by affiliating items to specific and preferred vendors, allowing your sales team immediate response time for any customer's questions about your current stock items and their prices. SIMMS provides users with a complete view of items set aside for production and/or sales, on-hand counts and the status of inventory items, functioning as both integrated and fully functional.
Precise Data Leads to Cost Control	Using standard, average, weighted average, FIFO or LIFO costing methods to form your tactical plans for success. Enter your various costs and prices as you create the items in the system and stay ahead of today's business diversity. Powerful processing features include straight-ahead physical counting, immediate historical information, manufacturer's lot tracking and as many transactions as you wish, each of which is individually and automatically processed and recorded, thus maintaining the accuracy of stock counts, and allowing your costing to grow and change with your needs.
Robust Pricing Converts Stock to Cash	Track which items sell and which ones do not, and move the old stock by implementing discounts for customers, volume prices, individual items and all your locations separately..
Streamlined Process of Inventory	Process purchases, adjust costs, create debit and credit memos, inventory transfers, stock adjustments (including those for damaged goods), and add extra costs to purchases in a feature rich environment.
Accurate Lot and Inventory Tracking	Reduce costs and save money by avoiding overstocking and unused space by using the accurate lot and inventory tracking of SIMMS. Powerful inventory control lets you maximize your profits. Track all items purchased by their manufacturer's lot numbers at every steps of your production process, as well as expiration dates that help you prevent delays due to understocking. Track by You can track inventory by status, costs, reorder points, committed stock, stock on order, on-hand or on assignment.
Custom Reports	Easily customize reports from SIMMS with Crystal Reports®, the standard of excellence on today's market , allowing the export of data and its easy distribution. The sales history of items, either by month , status or turnover can be pulled from the system with ease. Streamlined reporting tools in SIMMS keeps the data you need where you need it most, giving you the information to truly manage your inventory and keep the right amount of stock in the right place.
