THE INVENTORY SOFTWARE SOLUTION YOU CAN RELY ON.

Serial Number Tracking Functionality

SIMMS Serial Number Tracking system manages an unlimited amount of serial numbers from the time they are received into inventory until the time they are issued. This information is permanently recorded in the system, allowing inventory control personnel access to a wealth of historical and validation information. The information maintained by the Serial Number Tracking system is extremely helpful when returning a defective item to your vendor or when verifying a returned item from your customer.

There will be no more endless searching through filing cabinets when you have the SIMMS Inventory Management system. Instead, the information is right at your fingertips, saving you both time and money.

Features:

- Automatically generate your serial numbers or user serial numbers with ease
- Assign serial numbers to items during or immediately following receipt of goods
- Easily assign/sell serial numbers during or following the invoice
- Easily select serial numbers during an inventory transfer
- Easily assign serial numbers for kit components during a kit build
- Assign serial numbers to your finished kit builds
- Serial numbers can be entered/sold randomly or sequentially
- Drill-down and view serial numbers related to Items received or transferred and/or sold
- Track specific cost by serial number sold
- Easily integrate barcode reader for items w/serial number barcodes
- Report on serial number activity by date, location or serial number
- Trace a serial number in the system with ease
- Add up to two unique serial numbers per item
